Sarah : No, I haven't. I'm interested in some clubs, but it's very hard for me to choose one.

Hiroto : What are those clubs?

Sarah : The first one is the basketball club. I hear the team is very strong and it has won a lot of games in this city. I've played basketball for a long time. I'm fifteen years old now, and started playing it when I was five. I'm good at it, so I want to play on the team.

Sarah : Who is the person? Maybe you?

Hiroto : Yes! Actually, I'm a member of the volunteer club. I'll tell you about it.

Sarah : Oh, really? I didn't know that. Please tell me, Hiroto.

Hiroto : Sure. The club has twenty-five members. We volunteer in this city on the first and third weekends, Saturdays and Sundays, every month. One of our activities is cleaning the river near our school. It has a lot of waste now, so it isn't a good home for animals.

Sarah : That's too bad.

Hiroto : We can do only small things, but we believe that our activities can make a good change. So we work hard for the people and animals in this city.

Sarah : Your club is wonderful. I want to join it!

Can you answer if someone asks you, “What is IoT?” IoT is “the Internet of Things.” It means that we can transfer many kinds of data through the Internet. By connecting all “things” to the Internet, we can make our lives better.

In the old days, computers could be only connected to other computers. However, various things such as smartphones, tablets or other \*devices can be connected to each other now. In IoT technology, we attach a \*sensor to a device and get the information given by the sensor to do various things. We can know how the device is through the sensor. We can operate the device even if we are away from it.

\*Home appliances are one of the examples of products using IoT technology. IoT allows you to control home appliances \*remotely by connecting them to the Internet. For example, you can control your air conditioner and heater with IoT. In summer and winter, you’ll be glad if the temperature in the room is comfortable when you get home. You can switch on the air conditioner with a smartphone. If you are worried about forgetting to turn the air conditioner off, you can check the status and operate it with your smartphone, too.

The table shows popular IoT home appliances in an electrical appliance store. Air conditioners are the most popular. The device for locking the door comes in second, followed by LED lamps. With the lamps, we can change the color of the room for doing different things like reading books or listening to music and so on. If you often lose important things, the fourth device is useful. We can use the fifth device for [ ① ] of our cats or dogs. When we go out, we can see our pets and also can feed them with our smartphones. I’m interested in this kind of device, so I checked the \*word of mouth reviews of one model, “MY PET,” on the Internet. There were 516 reviews and the item has over four out of five stars.

IoT technology is used not only for home appliances but also for other various \*fields. Here are ②some examples. At IoT bus stops, bus \*operation data is sent \*on a real-time basis, so we can know how long we have to wait for the bus. In the USA, if you don’t feel good, you can see a doctor at home without going to the hospital. There is no need to wait in the waiting room when you are sick. With the appearance of 5G, the number of devices connected to the Internet will increase and become more familiar in our lives.
